

Bergari Solutions is offering specifically designed emissions reduction solutions to meet and exceed the EPA's Regulation for Internal Combustion Engines / National Emissions Standard for Hazardous Air Pollutants (RICE/NESHAP).

## RICE/NESHAP CATALYSTS

*Stand Alone Diesel Oxidation Catalyst*

*Combination Silencer and Diesel Oxidation Catalyst*

Typical applications are comprised of a specifically sized Diesel Oxidation Catalyst (DOC) into a unique housing mounted upstream of the exhaust silencer. The EPA may also require a CPMS (Continuous Parametric Monitoring System) for measuring and recording differential pressure across the catalyst and pre-catalyst exhaust gas temperature, in effort to ensure compliant operation. Bergari Solutions provides the engineering expertise and manufacturing capabilities for a complete RICE/NESHAP compliant system. Our range of products for these systems extends up to 3 MW diesel engines. Our options include the integration of an exhaust silencer in the system in various sound performance ranges, as well as a complete monitoring (CPMS) package and installation hardware kits

**Call on us at Bergari Solutions to review your specific requirements to meet the EPA – RICE/NESHAP emissions requirements.**
